Hosted at Johns Hopkins University,
Stieff Silver Building

To sign up or for more information,
check the JHU NACLO website at

naclo.clsp.jhu.edu

or write to us at

jhu.naclo@gmail.com

Can computers learn to use human language?

They're already trying - thanks to computational linguists. Search engines are getting smarter about finding information and translating it into English for you. We use voice commands with our phones. Google Voice will even turn your voicemails into written emails. Come to our info / practice session to talk about language technology, eat pizza, hook up your left brain to your right brain, try puzzles from the Computational Linguistics Olympiad, and win some prizes.

ABSOLUTELY NO BACKGROUND NECESSARY!

NACLO is an academic competition jointly sponsored by the Linguistic Society of America, the North American Chapter of the Association for Computational Linguistics, Carnegie Mellon University, Yahoo!, the US National Science Foundation, the University of Michigan, and the University of Pittsburgh Intelligent Systems Program. Top scorers in the Open Competition on January 25 will be eligible to compete in an Invitational Competition in March. Winners of the Invitational competition will be eligible to represent North America at the International Linguistic Olympiad. Thanks to the generosity of our sponsors, there is no participation fee for any NACLO event. More details about the event can be found on the national website at <http://www.nacloweb.org>.
